MUHAMMAD ABDULLAH

FULL-STACK DEVELOPER

Lahore, Pakistan | ohawanaofficial@gmail.com | +92 326 0778028 | linkedin.com/in/m-abdullah-awan-520715398 | github.com/OhAwanaOfficial

PROFILE

I'm a final-year BS Software Engineering student at The University of Lahore who likes turning ideas into things people can actually use. Most of what I build lives on the web: AI tools, SEO-driven sites and full-stack apps with real sign-in and databases, deployed on Vercel and GitHub Pages.

Alongside my degree I freelance on 3D work, delivering models to clients' specifications. That work led me to build my own tools, like Mesh Studio, which cleans up the messy meshes AI generators produce.

PROFESSIONAL EXPERIENCE

Freelance 3D Model Specialist

2025 – Present

Self-employed · Remote

- Deliver 3D models built to each client's brief, finding and managing clients directly through social media.
- Generate base models with AI 3D tools, then clean up and convert them into the formats clients need.
- Handle the whole job myself: requirements, revisions and final delivery.

Tools: AI 3D generators, Blender (basic)

SELECTED PROJECTS

PostCraft AI — LinkedIn Post Generator

2026

Solo developer

PostCraft AI generates LinkedIn posts in seconds. I first shipped it as a single-page HTML app, then rebuilt it in Next.js and TypeScript with user accounts through Clerk and a Supabase database.

- Live on Vercel
- Rebuilt from a static page into a full-stack app with sign-in

Tech: Next.js, TypeScript, Supabase, Clerk · postcraftai-next.vercel.app · github.com/OhAwanaOfficial/postcraftai-next

APA Citation Generator

2026

Solo developer

Formats APA references for books, websites and journal articles entirely in the browser, with no backend. Built as an SEO project: separate tool pages and how-to guides target citation keywords, with a sitemap and robots.txt, hosted on GitHub Pages.

- Formats books, websites and journal articles
- Keyword-targeted guide pages, sitemap and robots.txt

Tech: JavaScript, HTML, CSS, SEO · ohawanaofficial.github.io/apa-generator · github.com/OhAwanaOfficial/apa-generator

Mesh Studio — 3D Mesh Cleaner

2026

Solo developer

Drop in an OBJ or FBX file and Mesh Studio previews it in 3D, merges duplicate vertices to clean up the broken geometry AI generators produce, and exports a cleaned OBJ. Everything runs in the browser.

- Imports OBJ and FBX, exports cleaned OBJ
- Interactive 3D preview

Tech: Next.js, TypeScript, Three.js · awan-mesh-studio.vercel.app · github.com/OhAwanaOfficial/awan-mesh-studio

Awan Agent — AI Compliance Audit 2026

Solo developer

Awan Agent checks the AI tools a marketing agency uses against GDPR and European regulations such as the EU AI Act. It comes with an SEO-built product site, landing pages and a blog.

- Covers GDPR and the EU AI Act
- SEO-built site with landing pages and blog

Tech: HTML, CSS, SEO · ohawanaofficial.github.io/Awan-Agent · github.com/OhAwanaOfficial/Awan-Agent

3D Replicator 2026

Solo developer

3D Replicator rebuilds a 3D model from a reference model, supporting the conversion work I do for freelance clients.

Parking Hub 2026

Solo developer

Parking Hub helps drivers find nearby parking locations and book a spot, built with plain HTML, CSS and JavaScript and hosted on GitHub Pages.

Tech: JavaScript, HTML, CSS · ohawanaofficial.github.io/parking-hub · github.com/OhAwanaOfficial/parking-hub

SKILLS

Languages	JavaScript, TypeScript, Python, Java, C++, HTML, CSS
Frameworks	React, Next.js, Vite
Backend & Auth	Supabase, Clerk
Tools & Other	Git & GitHub, Vercel, GitHub Pages, SEO, AI 3D generators, Blender (basic)
